Based on your investment profile here is the Target Allocation we recommend for you:
Target allocation
ASSET CLASS
CURRENT ALLOCATION
TARGET ALLOCATION
Cash 2.5% 1.5%
International bonds 2.5% 2.5%
US bonds 20.0% 11.0%
International stocks 20.0% 22.0%
US stocks 52.5% 52.0%
Alternatives 1.0% 10.0%
Unclassified 1.5% 0.0%
Your Current Allocation is based on the assets you now hold in your portfolio. Your Target Allocation is a recommended Asset Allocation driven by the profile questions you answered. It seeks to find the greatest expected return, balanced with your need, desire and ability to take risk. This table compares the two across the six major liquid asset classes. Stocks provide great growth potential but can be the most risky. Bonds tend to be more stable than stocks, but are subject to price swings as interest rates change. Alternatives, such as Real Estate, Gold and other Commodities, provide additional diversification and can act as a hedge against inflation. Cash is the most stable asset class but typically has low returns.
